

Setting up the sophisticated experimental animal laboratory in conjunction with office function
(The co-research with Nippon Medical & Chemical Instruments Co., Ltd.)

In these years lab offices have become more and more functional. Especially, *In vivo* experimental lab is facing difficulties in locating it closer to administrative office room due to the fact that the control on mutual infectious diseases and odors is extremely challenging. At Kobayashi lab, in collaboration with Nippon Medical & Chemical Instruments Co., Ltd., the development of experimental-animal-related devices under totally new concept has been initiated. The lethal device to solve the issues has been under development at Kobayashi lab located in the room 7S4 of Research Park Building at Keio University School of Medicine with the President Mr. Kijihana of Nippon Medical & Chemical Instruments Co., Ltd.
